Alexandrite

Alexandrite is a rare variety of the mineral chrysoberyl known for its ability to change color in different light sources. It was named after Emperor Alexander II of Russia where it was first discovered in 1830. In its finest quality, alexandrite will change from green in daylight to red in incandescent light. Significant sources of alexandrite include Brazil, Sri Lanka, and Madagascar.

Characteristics

Mineral	Mohs Hardness	Toughness	Birthstone
Chrysoberyl	8.5	Good	June

Details

Item Description

One loose stone

Weight

3.03 carats

Measurements

9.51 x 6.54 x 4.72 mm

Shape

Cushion

Color

Bluish Green changing to Pinkish Purple

Transparency

Transparent

Cutting Style: Crown

Modified Brilliant Cut

Cutting Style: Pavilion

Step Cut

Results

Species

Natural Chrysoberyl

Variety

Natural Alexandrite

Geographic Origin

Sri Lanka

Comments

Any statement on geographic origin is an expert opinion based on a collection of observations and analytical data.
